KS: activation manifold & level-set foliation of the attractor (observable z_{19}, LassoLars degree-2 readout)

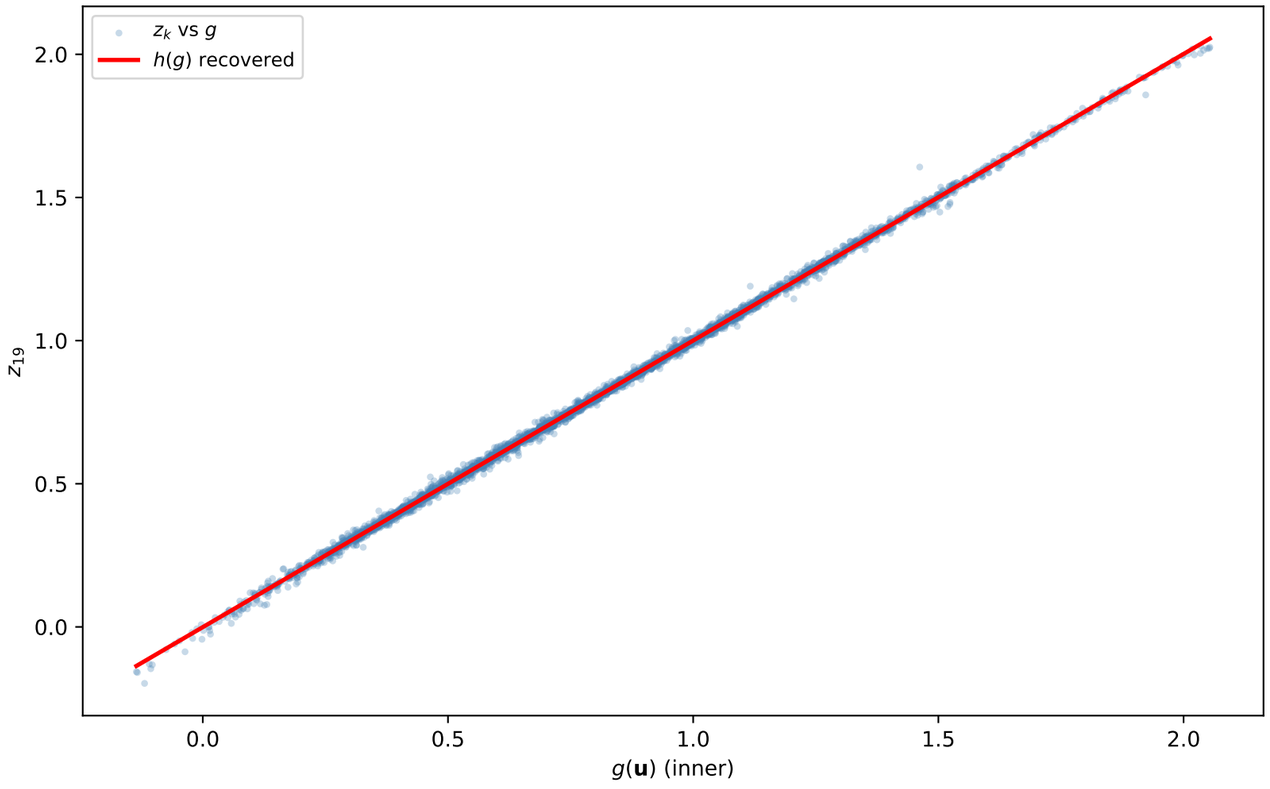

(a) KS attractor (POD proj) colored by observable z_{19}

(b) Level sets of g (LARS inner, 87 atoms) foliate the attractor [$R^2(h \circ g)$=0.999]

(c) Outer function $h(g)$ (near-linear ⇒ observable ≈ linear)

(d) Observable is a slow collective coordinate along a trajectory
